

Token Functionality

All the software development services can be bought only with tokens.

Tokenholders have a number of privileges:

- access to links on free software (for clients),
- priority for receiving tasks (for Partners),
- opportunity to earn money by performing different roles in the ecosystem.

Why buying OpenGift tokens?

Absolutely legal: we apply for 506(c) exemption of Reg D and in US can sell tokens only to accredited investors.

Huge market: We estimate the market niche of our immediate focus to be worth around \$12 Billion only in US. The overall software development market is estimated \$357B.

Supportive macro trends: growing shortage of experienced developers, growing usage of open source software, adoption of a sharing model in many spheres of life.

Working business: paying customers, 100+ projects, HyperLedger blockchain in production.

Token price supported by business processes + limited emission (no forging or mining).

DAICO
